**Software developer, NUS School of Computing, Singapore      Jan, 2017 - July, 2017**

- The lab provides a testbed of SDN switches which uses a network hypervisor, OpenVirteX, to create multiple virtual and programmable networks on top of a single physical infrastructure.
- OpenVirteX currently supports only OpenFlow 1.0. I developed support for higher versions of OpenFlow for OpenVirteX using OpenFlowJ-Loxi, a Java artifact of Loxigen, which exposes the OpenFlow protocol through a version-agnostic, fluent Java API.

**OTHER SELECTED PROJECT      Cab booking website using React JS**

- Developed an outstation cab booking website using React JS and Firebase Realtime Database.
- Used Material-UI library, Google Places API, Firebase authentication and React bootstrap library. [\[Github link\]](#) [\[Website link\]](#)
